

# ORBITAL LAUNCHES FROM ERANGE SPACE CENTER

Simon Westerlund

*Esrange Space Center, 98191 Jukkasjärvi, SWEDEN*

Esrange Space Center is rapidly expanding with a new launch complex focused on orbital launches and reusability testing. Three launch pads are being built. Pad A: for small orbital and suborbital rockets. Pad B: a 40 x 40 m concrete landing pad for reusability testing. Pad C: for micro launchers. At the new launch complex there is a launch vehicle integration building that can house two parallel launch campaigns with clean rooms, integration halls and offices. Esrange Space Center has more than 50 years of experience of launching rockets and stratospheric balloons. As we grow, Esrange will be the number one orbital launch site in mainland Europe.
